

Deep Learning:-

Machine Learning → Teaching comp to recognise Patterns in data

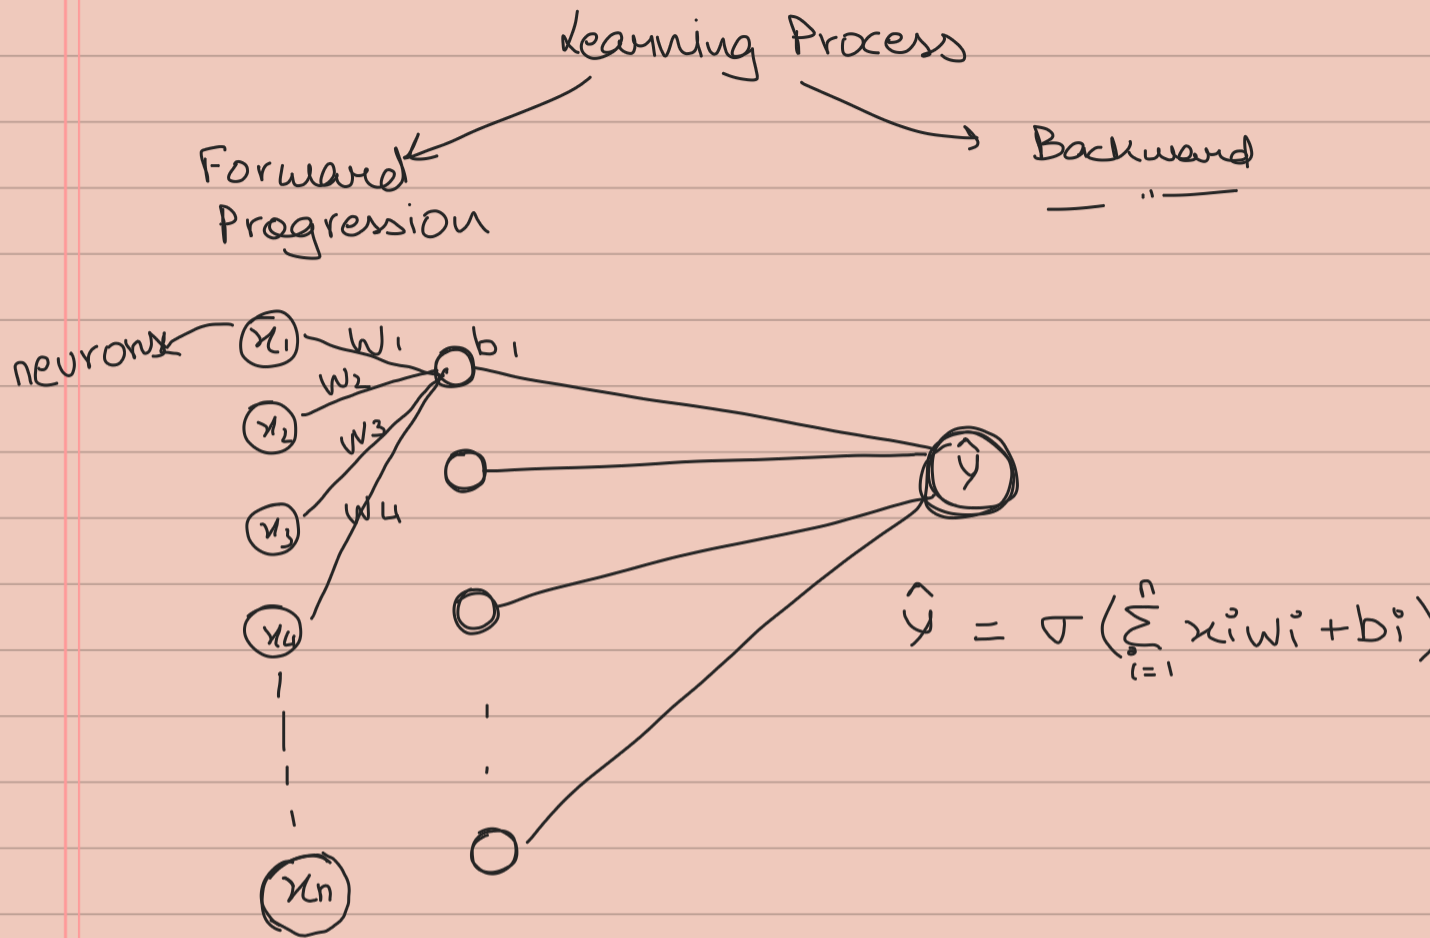

Deep learning → ML technique that learns features and tasks directly from data

↓
Inputs through NN;
NN have hidden layers.

Why?

- ① Data is prevalent
- ② Improved Hardware
- ③ New software.

• Neural Networks :-

Learning Algo

- Initialize Parameters with random values
- Feed input data to network
- Compare predicted value to the expected value & calculate the loss
- Perform Backward propagation this loss back through the network
- Update parameters based on the loss
